

Final Coder Meeting:

Questions & Discussion

1. Welcome & Purpose (3–5 min)

- Quick overview of where we are in the project.
 - *Outline next steps:*
I will be reviewing and tidying the coding, checking agreement, and preparing the dataset for manuscript writing.
 - *Emphasise goals:*
improve coherence, resolve ambiguities, and strengthen the final dataset.
-

2. Reflections on Coding Experience & NVivo Workflow (7–10 min)

Let's start broadly with your experience of coding and working in NVivo.

NVivo workflow:

- Did you experience any NVivo-related difficulties—technical, organisational, or procedural?
- Did you use comments or annotations for tricky excerpts?
 - If so, are there specific places you want me to look at during reconciliation?
- Any parts of the workflow (coding stripes, node selection, double-coding) that were particularly easy or challenging?

General reflections / Codebook functionality:

- Which codes felt easiest to use / most intuitive or straightforward to apply?
 - Which codes required the most interpretation or judgment / felt ambiguous or difficult?
What made them challenging?
 - Were there any recurring uncertainties or decision points when choosing a code?
-

3. Codebook Clarification & Decision Boundaries (12–15 min)

Following on from that, let's dig deeper into boundaries and conceptual decisions.

Ambiguities and overlaps:

- Were there specific pairs of codes that you often had trouble choosing between?
- Were there specific instances where two categories overlapped, such as Personal Significance vs Emotions and Affective States? Demographics and Identity vs Social groups and collectives? Historical Mythical Religious figures vs Animals and creatures (e.g. Aliens)?
- How did you distinguish between Musical and sonic qualities, Object features and qualities, Traits affective states and appearances, Emotions and affective states, Scene qualities and atmosphere?
- Were there any codes that consistently felt too broad or too narrow?

Coding decisions:

- How did you decide when to apply multiple codes to a single excerpt versus choosing the best fit?
 - Did you encounter passages that repeatedly didn't fit well into the codebook? Which ones?
 - Are there any changes you think would improve the clarity, precision, or usefulness of the codebook for future rounds?
-

4. Patterns, Co-occurrences, and Dataset Structure (10–12 min)

Next, let's explore broader conceptual patterns you observed.

Patterns and observations:

- Did you notice any recurring patterns in the data, such as common co-occurrences or frequent pairings of categories? Which categories seemed to most often appear together?
- Did certain participants or types of responses stand out as distinctive or particularly vivid?

- Were there notable subthemes or “mini-stories” inside the broader categories?

Narrative and insights for the write-up:

- What struck you most about what people think about while listening to music?
- Were there any unexpected associations or themes that surprised you?
- If you had to summarise the overall narrative of the dataset—what it tells us about music-evoked thoughts—how would you describe it?
